**Subject:** Re: HV CWCM filters....

Hi Rob,

It turns out we don't need anything from the CPG for the pre-program analyses. Axys will bake glass fiber filter material from their own supply for the pre-program testing.

For the actual split sampling, we don't plan to bring our own glass fiber material, filter cartridges, flat filters, or PUF cartridges to the field. Instead, we are assuming that the CPG and Gravity staff will have the Gravity devices set up and pre-loaded with filter cartridges, flat filters, PUF media, etc. so that the sampling media are consistent between parent and split samples. When we take custody of the split sample, for example from the pre-filter, it will just be the removed glass fiber material from the cartridge housing, placed into a sample jar or bag, so we won't need to borrow any cartridge housings.

Are there any concerns with this approach?

Thanks,  
Stephanie

Subject: Re: HV CWCM filters....

Does AXYS need the cartridges filled with glass wool or just the cartridge?. iF it is the later then I am to told that these are the same cartridges that are used for the infiltrex equipment and we can provide them with cleaned-glass wool. Gravity has a limited number and is reluctant however, they will provide filter cartridges but with the understanding that Axys returns them within two weeks.

Hi Rob,

Just checking on the status of the glass-wool fiber filters. Have they been sent to Axys? If not, when? Pre-cleaned, or not pre-cleaned but with the SOP?

Thanks,  
Stephanie
